

CPTS 423

Team 8

Minutes of Meeting

09/02/26

Attendees: Albert Li, Anh Duong, Arezoo Zare (Client)

Agenda: Reconvene after summer, reidentify goals for the program

General Updates:

Since client was unable to obtain training data for modeling, we are pivoting towards adding an indentation crack length algorithm that can predict crack lengths from microscopic images, as well as a pop-in locator that can predict the pop-in from an inputted load/depth curve.

Discussed obtaining training data for ML algorithm for indentation lengths.

Next Meeting: 09/09/26

09/09/26

Attendees: Albert Li, Anh Duong, Ryan Calimlim, Arezoo Zare (Client)

Agenda: Discuss work on pop-in algorithm, training data needed

General Updates:

Client approved of program prototype for the pop-in algorithm without ML. Training data still needs to be obtained from the client before ML can be used for pop-in. Training data for indentation will be obtained in the coming days, which will be labeled and used for ML algorithm.

Next Meeting: 09/16/26
